- ASP.NET MVC
- ASP.NET Web API
- RESTful API
- MS SQL & PostgreSQL
- Entity Framework (ORM)
- Redis, Docker, Message Broker (RabbitMQ)
- DevOps (Azure), CI/CD (GitHub Actions, Jenkins)
- Version Control (Git)
- Onion Architecture, Design Patterns, OOP, SOLID principle
- Unit Testing (xUnit, NUnit)
- HTML, CSS (Bootstrap), JavaScript, Figma

WORK EXPERIENCE

Dendclub.com (Startup)

2025 JAN - PRESENT

Back-End Developer

Remote

- Develop medical software using ASP.NET Core and MS SQL Server.
- Design optimized database schemas and implement scalable backend systems with Onion Architecture, Repository Pattern, and CQRS.
- Write unit and integration tests with xUnit, Moq, and FluentAssertions to ensure reliable, maintainable, and well-tested code.
- Collaborate with cross-functional teams using Git for version control and branching.

Perspektiv.az (Startup)

2025 FEB - PRESENT

Back-End Developer

Baku, Azerbaijan - Hybrid

- Develop and maintain a scalable job platform using ASP.NET Core and PostgreSQL.
- Apply Onion Architecture and design patterns like Repository and CQRS to create clean, modular, and maintainable code.
- Utilizing Hangfire for background jobs and implementing OTP authentication, JWT and localization for enhanced functionality.
- Collaborate in a Git-based team environment for seamless backend-frontend integration and continuous delivery with CI/CD pipelines.
